

Initial design

Notifications are added from the bottom to top

Reaching the 5th stack, the notifications start grouping

Clicking on the grouped stack will collapse the current stack and bring up the older stack

User can delete from the stack

Google Search

I'm Feeling Lucky

Final iteration (Please see the app itself):

I tried to take a similar colour scheme as used on the RiskIdent website.

This gives the notifications centre, a distinct look that should fit in with RiskIdent

I don't think I really fulfilled the requirement for showing only 5 notifications, the only thing I could do was limit the take to go up to a certain height.

I used a little of animate.css for the 'dismiss' button, I think more could be used, i.e. slideInLeft when a new notification come in.

Might be possible to have an section, which just "pops" out the most latest notification. And all the rest go into the scrollable section for later review.

A smaller profile might even be better, could just use the "RiskIdent" logo with some slight modification
